

MEET MANOMET'S SHOREBIRDS  
WITH PERSONALITY

# Magellanic Plover

The Magellanic Plover is a rare shorebird found in Argentina and Chile. It has soft gray feathers, pink legs, and big, bright red eyes. Instead of pecking for food like other shorebirds, it stirs up the mud with its feet to find tiny snacks. Because its home is changing due to climate and human activity, we are studying this special bird to help protect it.

We're on a mission to rally 600 new donors by August 31, 2025, to help turn the tide for shorebirds! Every gift—big or small—helps us protect these incredible travelers. **Chip in today**, and know that Magellanic Plovers (and all of us at Manomet) are giving you a big, grateful squawk of thanks!
